This is a directory of companies that grant franchises with detailed information for each listed franchise. Even before the present Administrator of NASA, Daniel Goldin, made the phrase 'better, faster, cheaper' the slogan of at least the Office of Space Science, that same office under the Associate Administrator of Lennard Fisk and its Division of Solar System Exploration under the direction of Wes Huntress had begun a series of planetary spacecraft whose developmental cost, phase CID in the parlance of the trade, was to be held to under \$150M. In order to get the program underway rapidly they chose two missions without the open solicitation now the hallmark of the program. One of these two missions, JPL's Mars Pathfinder, was to be a technology demonstration mission with little immediate science return that would enable later high priority science missions to Mars. Many of the science investigations that were included had significant foreign contributions to keep NASA's cost of the mission within the Discovery budget. The second of these missions and the first to be launched was the Near Earth Asteroid Rendezvous mission, or NEAR, awarded to Johns Hopkins University's Applied Physics Laboratory. This mission was quite different than Mars Pathfinder, being taken from the list of high priority objectives of the science community and emphasizing the science return and not the technology development of the mission. This mission was also to prove to be well under the \$150M phase CID cap. A combination of poor planning, weak oversight and greed cheated U.S. taxpayers and undermined American forces in Iraq and Afghanistan. U.S. taxpayers have paid nearly \$51 billion

for projects in Iraq, including training the Iraqi army and police and rebuilding Iraq's oil, electric, justice, health and transportation sectors. Many of the projects did not succeed, partly because of violence in Iraq and friction between U.S. officials in Washington and Iraqi officials in Baghdad. The U.S. gov't. "was neither prepared for nor able to respond quickly to the ever-changing demands" of stabilizing Iraq and then rebuilding it. This report reviews the problems in the war effort, which the Bush admin. claimed would cost \$2.4 billion. Charts and tables. This book reports on the proceeding of the 5th International Conference on Intelligent, Interactive Systems and Applications (IISA 2020), held in Shanghai, China, on September 25–27, 2020. The IISA proceedings, with the latest scientific findings, and methods for solving intriguing problems, are a reference for state-of-the-art works on intelligent and interactive systems. This book covers nine interesting and current topics on different systems' orientations, including Analytical Systems, Database Management Systems, Electronics Systems, Energy Systems, Intelligent Systems, Network Systems, Optimization Systems, and Pattern Recognition Systems and Applications. The chapters included in this book cover significant recent developments in the field, both in terms of theoretical foundations and their practical application. An important characteristic of the works included here is the novelty of the solution approaches to the most interesting applications of intelligent and interactive systems. This book offers a concrete contribution towards a better understanding of climate change communication. It ultimately helps to catalyse the sort of cross-sectoral action needed to address the phenomenon of climate change and its many consequences. There is a perceived need to foster a better understanding of what climate change is, and to identify approaches, processes, methods and tools which may help to better communicate it. There is also a need for successful examples showing how communication can take place across society and stakeholders. Addressing the challenges in communicating to various audiences and providing a platform for reflections, it showcases lessons learnt from research, field projects and best practices in various settings in various different countries. The acquired knowledge can be adapted and applied to other situations. This book improves our understanding of terrorists' motivations and rationality and may, ultimately, also indicate how to respond to the phenomenon of terrorism. In his research studies, Eric van Um explores the political rationality of terrorist groups. The political rationality model builds on rational choice theory. It demands that terrorist groups take into account the costs and benefits of their available options and choose the option promising them the highest political utility. Testing the explanatory power of this model is relevant, as rational choice approaches have become very prominent in terrorism research. But, at the same time, their empirical power remains highly contested. Increased knowledge of the political rationality model not only promises added value for terrorism research itself, but also for social sciences more generally. For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network. There are over 20 million young people of color in the United States whose representation in STEM education pathways and in the STEM workforce is still far below their numbers in the general population. Their participation could help re-establish the United States' preeminence in STEM innovation and productivity, while also increasing the number of well-educated STEM workers. There are nearly 700 minority-serving institutions (MSIs) that provide pathways to STEM educational success and workforce readiness for millions of students of color and do so in a mission-driven and intentional manner. They vary substantially in their origins, missions, student demographics, and levels of institutional selectivity. But in general, their service to the nation provides a gateway to higher education and the workforce, particularly for underrepresented students of color and those from low-income and first-generation to college backgrounds. The challenge for the nation is how to capitalize on the unique strengths and attributes of these institutions and to equip them with the resources, exceptional faculty talent, and vital infrastructure needed to educate and train an increasingly critical portion of current and future generations of scientists, engineers, and health professionals. Minority Serving Institutions examines the nation's MSIs and identifies promising programs and effective strategies that have the highest potential return on investment for the nation by increasing the quantity and quality MSI STEM graduates. This study also provides critical information and perspective about the importance of MSIs to other stakeholders in the nation's system of higher education and the organizations that support them. This book constitutes the refereed proceedings of the 6th Computational Color Imaging Workshop, CCIW 2017, held in Milano, Italy, in March 2017. The papers are organized in topical sections on color image processing; color image quality; color in digital cultural heritage; spectral imaging; color characterization; color image analysis. Volume 111 of Terrorism: Commentary on Security Documents, Discerning President Obama's National Security Strategy, makes available documents from the first fifteen months of the Obama administration that provide insights into its developing national security strategy. We describe how to design a state-of-the-art data center and networking infrastructure combining Cisco and IBM solutions. The objective is to provide a reference guide for customers looking to build an infrastructure that is optimized for virtualization, is highly available, is interoperable, and is efficient in terms of power and space consumption. It will explain the technologies used to build the infrastructure, provide use cases, and give guidance on deployments. Product Description: The billions of dollars expended in Iraq constitute the largest relief and reconstruction exercise in American history. SIGIR's lessons learned capping report characterizes this effort in four phases (pre-war to ORHA, CPA, post-CPA/Negroponte era, and Khalilzad, Crocker, and the Surge). From this history, SIGIR forwards a series of conclusions and recommendations for Congress to consider when organizing for the next post-conflict reconstruction situation. Over the past five years, the United States has provided nearly fifty billion dollars for the relief and reconstruction of Iraq. This unprecedented rebuilding program, implemented after the March 2003 invasion, was developed to restore Iraq's essential services, build Iraq's security forces, create a market-based economy, and establish a democratic government--all in pursuit of U.S. interests in

a stable and free Iraq. Did the U.S. rebuilding program achieve its objectives? Was the money provided well-spent or wasted? What lessons have we learned from the experience? Hard Lessons: The Iraq Reconstruction Experience, a report from the Special Inspector General for Iraq Reconstruction (SIGIR), answers these and other important questions by presenting a comprehensive history of the U.S. program, chiefly derived from SIGIR's body of extensive oversight work in Iraq, hundreds of interviews with key figures involved with the reconstruction program, and thousands of documents evidencing the reconstruction work that was - or was not - done. The report examines the limited pre-war planning for reconstruction, the shift from a large infrastructure program to a more community-based one, and the success of the Surge in 2007 and beyond. Hard Lessons concludes that the U.S. government did not have the structure or resources in place to execute the mammoth relief and reconstruction plan it took on in 2003. The lessons learned from this experience create a basis for reviewing and reforming the U.S. approach to contingency relief and reconstruction operations. The first volume of this six-volume compendium contains guidelines for determining the properties of polymer matrix composite material systems and their constituents, as well as the properties of generic structural elements, including test planning, test matrices, sampling, conditioning, test procedure selection, data reporting, data reduction, statistical analysis, and other related topics. Special attention is given to the statistical treatment and analysis of data. Volume 1 contains guidelines for general development of material characterization data as well as specific requirements for publication of material data in CMH-17. The primary purpose of this volume of the handbook is to document industry best-practices for engineering methodologies related to testing, data reduction, and reporting of property data for current and emerging composite materials. It is used by engineers worldwide in designing and fabricating products made from composite materials. The Composite Materials Handbook, referred to by industry groups as CMH-17, is a six-volume engineering reference tool that contains thousands of records of the latest test data for polymer matrix, metal matrix, ceramic matrix, and structural sandwich composites. CMH-17 provides information and guidance necessary to design, analyze, fabricate, certify and support end items using composite materials. It includes properties of composite materials that meet specific data requirements as well as guidelines for design, analysis, material selection, manufacturing, quality control, and repair. The AACR Annual Meeting is a must-attend event for cancer researchers and the broader cancer community. There will be a number of presentations that include exciting new data from cutting-edge clinical trials as well as companion presentations that spotlight the science behind the trials and implications for delivering improved care to patients. This book contains abstracts 1-2696 presented on April 17-18, 2016, at the AACR Annual Meeting. From unsafe working conditions in garment manufacturing to the failure to consult indigenous communities with regard to extractive industries that affect them, human rights violations remain a pervasive aspect of the global economy. Advocates have long called upon states, as the primary duty bearers and enforcers of human rights, to hold corporations directly accountable for violations committed throughout the supply chain. More recently, many business and human rights advocates have considered the development and enforcement of private regulatory initiatives (PRIs) to certify that actors along the supply chain conform to certain codes of conduct. Many advocates see these PRIs as holding the potential to create better outcomes—whether for workers, affected communities, or the environment—within a global economy structured by supply chain capitalism. This volume brings together academics and practitioners from a number of regions throughout the world to engage in theoretical analysis, case study exploration, and reflection on a variety of PRIs. Theorizing outward from the work of practitioners and activists on the ground, the book brings essential but often overlooked questions to the scholarly debates on business, human rights, and global governance. Ultimately, the contributions coalesce around one basic claim: that the inequalities and disparities of power and wealth that are a key characteristic of the contemporary global economy can also mark the origins and operation of PRIs, and do so to varying degrees. The collection highlights the need for discussions about labor, environmental, and other human rights accountability to be situated within a broader analysis of the political economy of contemporary supply chain capitalism. It seeks to enrich discussions of PRIs by bringing into the conversation concerns about distributive justice and political economy. Offers straightforward answers to questions commonly asked by wounded U.S. military veterans and their family members. Brings together information on medical treatments, as well as financial, legal, and tax matters. \*\*\* In June 2017, the 70-347 Exam was updated with a new objective domain: Configure and Secure Office 365 services. According to the motion law of the mass point system and the centripetal force formula of the curve, it can be

determined through theoretical analysis and mathematical derivation: (1) Kepler's law of planetary motion contradicts the motion rules of mass point systems. (2) The universal gravitational force  $F$  between planet  $m$  and sun  $M$ .  $K$  is the new gravitational constant. The force  $F'$  on the object  $m$  in the inertial frame  $S'$ . In the formula,  $V'$  is the velocity of the object  $m$  in the inertial frame  $S'$ , and  $u$  is the velocity of the inertial frame  $S'$  in the cosmic space reference frame. In addition, the author designed three new optical experiments based on the light interference theory to verify whether the principle of constant speed of light conforms to objective facts. Experiment 1. Using the new front and rear hole laser interferometer for verification; Experiment 2. Verification of using long and short optical path Michelson interferometers; Experiment 3. Verification of using a double-hole interferometer.
