Happiness Is a Serious Problem
Apr 05 2021 In this unique blend of self-help and moral philosophy, perfect for fans of Gretchen Rubin's The Happiness Project or Dan Harris' 10% Happier, talk-radio host Dennis Prager shows us that happiness isn't just a value—it's a moral obligation. When you ask people about their most cherished values, "happiness" is always at the top of the list. In this enduring happiness manifesto, Prager examines how happiness not only makes people better, but has an effect on the lives of everyone around us—providing them with a positive environment in which to live and be happy themselves. Achieving that happiness won't be easy, though: to Prager, it requires a continuing process of counting your blessings and giving up any expectations that life is supposed to be wonderful. "Can we decide to be happy with what we have?" he asks. "A poor man who can make himself satisfied with his portion will be happier than a rich man who does not allow himself to be satisfied." Prager echoes other political commentators in complaining that people today see themselves as victims; he submits that the only way to achieve your desires is to take responsibility for your life rather than blaming others. If you're willing to put some thought into achieving a happier outlook, you will find it. Buy the book and mull over in Happiness Is a Serious Problem.

Semiconductor Design and Implementation Issues in Integrated Vehicle Electronics Aug 17 2019 This major research study provides a fresh, critical look at the way automobile electronics are and should be built. Written by Silicon Valley John Hall, this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other customers. Highly readable and comprehensible for even beginning students of electronics and semiconductor design, this volume provides an in-depth explanation of the factors to be considered when building vehicle systems. Starting with a concise history of vehicle electronics, Hall walks the reader through the environmental conditions faced by these systems and the variety of failure mechanisms that can occur. Basic and advanced semiconductor issues raised by vehicle implementation are then discussed in detail. A wide range of issues confronting designers--marketing of risky features to time and cost constraints--are explained. Complex electronic modules from many manufacturers are examined and discussed as real-world case studies of good and bad design techniques. Hall concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher designs with little or no incremental production cost. This book is the first major work to focus on key issues emerging as microelectronics safety and performance problems. Vehicle makers increasingly seek market advantages by providing ever-more-complex electronics in their products. While these features add much value to vehicles, they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators. By combining decades of design and innovation with extensive research, Hall has produced unique insights and explanations so engineers can prevent or perhaps all, of these problems. John Hall is one of Silicon Valley's most prolific independent pioneers and inventors. He founded Union Carbide's semiconductor operation in 1962. He is a founder of Interstil and Micro Power Systems, inventor of the first electronic watch, first LCD digital watch; first CMOS liquid crystal display hand held calculator, autofocus cameras among many successful commercial products. He has worked for many American and foreign companies on specific projects such as integrated two way radios and seat belt interlocks. He is working with DoD on hard-core electronics systems against non nuclear events.
