Barbara La Marr's (1896--1926) publicist once confessed: "There was no reason to lie about Barbara La Marr. Everything she said, everything she did was colored with news-value." When La Marr was sixteen, her older half-sister and a male companion reportedly kidnapped her, causing a sensation in the media. One year later, her behavior in Los Angeles nightclubs caused law enforcement to declare her "too beautiful" to be on her own in the city, and she was ordered to leave. When La Marr returned to Hollywood years later, her loveliness and raw talent caught the attention of producers and catapulted her to movie stardom. In the first full-length biography of the woman known as the "girl who was too beautiful," Sherri Snyder presents a complete portrait of one of the silent era's most infamous screen sirens. In five short years, La Marr appeared in twenty-six films, including *The Prisoner of Zenda* (1922), *Trifling Women* (1922), *The Eternal City* (1923), *The Shooting of Dan McGrew* (1924), and *Thy Name Is Woman* (1924). Yet by 1925 -- finding herself beset by numerous scandals, several failed marriages, a hidden pregnancy, and personal prejudice based on her onscreen persona -- she fell out of public favor. When she was diagnosed with a fatal lung condition, she continued to work, undeterred, until she collapsed on set. She died at the age of twenty-nine. Few stars have burned as brightly and as briefly as Barbara La Marr, and her extraordinary life story is one of tempestuous passions as well as perseverance in the face of adversity. Drawing on never-before-released diary entries, correspondence, and creative works, Snyder's biography offers a valuable perspective on her contributions to silent-era Hollywood and the cinematic arts.

Undersea Atrophia is the second book in the Undersea Saga. #1 New York Times Bestseller Over 10 million copies sold In this generation-defining self-help guide, a superstar blogger cuts through the crap to show us how to stop trying to be "positive" all the time so that we can truly become better, happier people. For decades, we've been told that positive thinking is the key to a happy, rich life. "F**k positivity," Mark Manson says. "Let's be honest, shit is f**ked and we have to live with it." In his wildly popular Internet blog, Manson doesn't sugarcoat or equivocate. He tells it like it is—a dose of raw, refreshing, honest truth that is sorely lacking today. The Subtle Art of Not Giving a F**k is his antidote to the coddling, let's-all-feel-good mindset that has infected American society and spoiled a generation, rewarding them with gold medals just for showing up. Manson makes the argument, backed both by academic research and well-timed poop jokes, that improving our lives hinges not on our ability to turn lemons into lemonade, but on learning to stomach lemons better. Human beings are flawed and limited—"not everybody can be extraordinary, there are winners and losers in society, and some of it is not fair or your fault." Manson advises us to get to know our limitations and accept them. Once we embrace our fears, faults, and uncertainties, once we stop running and avoiding and start confronting painful truths, we can begin to find the courage, perseverance, honesty, responsibility, curiosity, and forgiveness we seek. There are only so many things we can give a f**k about so we need to figure out which ones really matter, Manson makes clear. While money is nice, caring about what you do with your life is better, because true wealth is about experience. A much-needed grab-you-by-the-shoulders-and-look-you-in-the-eye moment of real-talk, filled with entertaining stories and profane,

ruthless humor, *The Subtle Art of Not Giving a F**k* is a refreshing slap for a generation to help them lead contented, grounded lives. School buildings have a crucial contribution to make to raising educational achievement. Designing high performance school buildings for the 21st century for all children is a shared concern amongst OECD countries. Innovative research seeks architectural answers

that make efficient use of the resources invested in building, renovating and running schools. Changes in the design of those buildings must serve the educational process and improve the quality of the learning environment. A major challenge is to secure the best possible design input to deliver schools that will meet future needs and expectations and offer a positive environment that supports learning and teaching.
