Critical Role of Animal Science Research in Food Security and Sustainability Dec 29 2019 By 2050 the world's population is projected to grow by one-third, reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture, both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security; evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems; and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies, and new ways of approaching agriculture if the food, feed, and fiber needs of the global population are to be met. The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.

Smart Growth Jan 10 2021 A Wall Street Journal bestseller Named one of 10 Best New Management Books for 2022 by Thinkers50 Creating a culture of learning and growth. Growth is the goal. Helping people develop their potential—enabling them to articulate and become the self they want to be, are capable of being, and that best serves them and others in the short and long term—is what we as individuals and leaders strive toward. But how do we grow? It turns out it happens in a predictable way, which means we can understand where we are in our growth and chart a way forward. In this compact, complete guide, Whitney Johnson dives more deeply than ever into the S Curve of Learning so that you can envision how growth happens and direct yourself and others in your organization to create a culture that fosters it. The growth and learning journey

comes in three phases: the Launch Point, the Sweet Spot, and Mastery. Compelling examples of successful people will show you when and why growth is slow, how to keep going, what to do when growth and learning are almost too fast to keep up with, and how to leap from one growth journey to another. As individuals grow, so do organizations and societies. Growth is learning put into action—action that betters the world as we better ourselves and our small niches, both personal and professional, within it. Growth occurs when learning is internalized—when we try something new and invest the effort to move it from being something we do to something we are.
