Anatomy of a Design Proposal Nov 25 2019 It didn't take Mike Janda, owner of the design firm, RiSER, long to realize that the one-page, line-item priced proposals he sent to clients back in his freelance days would need to "grow up" if he was going to expand his business. Over the course of his 11 years running RiSER, Janda and his team fine tuned their request for proposal (RFP) format and used it to successfully land millions of dollars of business from high-profile clients such as Google, Disney, NBC, FOX, National Geographic, Warner Bros., and others. While no proposal format is perfect—and this certainly isn't the only way to secure new work—the RiSER proposal format is both proven and successful. In *Anatomy of a Design Proposal*, Janda not only shares his format for creating a successful RFP—with practical advice on scheduling, pricing, and communicating with clients that any designer will find useful—he also gives you a customizable template that you can download and use for creating your own proposals.

Neural Networks in Telecommunications Nov 05 2020
Neural Networks in Telecommunications consists of a carefully edited collection of chapters that provides an overview of a wide range of telecommunications tasks being addressed with neural networks. These tasks range from the design and control of the underlying transport network to the filtering, interpretation and manipulation of the transported media. The chapters focus on specific applications, describe specific solutions and demonstrate the benefits that neural networks can provide. By doing this, the authors demonstrate that neural networks should be another tool in the telecommunications engineer's toolbox. Neural networks offer the computational power of nonlinear techniques, while providing a natural path to efficient massively-parallel hardware implementations. In addition, the ability of neural

networks to learn allows them to be used on problems where straightforward heuristic or rule-based solutions do not exist. Together these capabilities mean that neural networks offer unique solutions to problems in telecommunications. For engineers and managers in telecommunications, *Neural Networks in Telecommunications* provides a single point of access to the work being done by leading researchers in this field, and furnishes an in-depth description of neural network applications.
