Critical Themes in Drama is concerned with the relationship between drama and the current socio-political context. It builds on and contributes to ongoing scholarly conversations regarding the use, benefit, challenges and opportunities for drama and theatre as a social, cultural, educational and political act. The intention**

of this book is to canvas current theory and practice in drama, to provide an extended examination of how drama as a pro-social practice intersects with socio-cultural institutions, to link critical discourse and examine ways drama may contribute to a broader social justice agenda. Authors draw on a variety of theoretical tools from the fields of sociology, anthropology and cultural studies. This combines with an exploration of work from drama practitioners across a variety of countries and practices to provide a map of how the field is shaped and how we might understand drama praxis as a social, cultural and political force for change. This book offers drama scholars, practitioners, researchers and teachers a critical exploration which is both hopeful and critical; acknowledging the complexities and potential pitfalls, while celebrating the opportunities for drama as a practice for social action and positive change. atrocities that has resulted from modern societies embracing Darwinian evolution throughout most of the 20th century. The evidence presented in the book puts allegations of a blind-faith approach directly in the corner of the atheist. A must read for anyone who is engaging in serious inquiry into the question of whether or not our universe and the life that is the result of a Creator instead of time and chance. Artfully weaving in the analytic theme of "power" and the evaluative theme of "citizenship," Christine Barbour and Gerald C. Wright deftly draw students into thinking critically about how and why institutions and rules determine who wins and who loses in American politics. Every section and feature in the book has one goal in mind: to get students to think analytically and be skeptical of received wisdom. **Keeping the Republic: Power and Citizenship in American Politics** is now a Media Edition. Critical Reflection showcases the role of reason in a world saturated by media-enhanced persuasion and complex scientific and technological jargon. Drawing from the classic philosophical texts, this engaging textbook on the art of analyzing arguments is also relevant to today's undergraduates in its use of real-life examples and exercises drawn mainly from media and politics. Malcolm Murray and Nebojsa Kujundzic cover the standard subjects in a one-semester course on critical thinking, offering ways to analyze arguments. This book offers a series of analyses of contemporary media texts that illustrate how Antonio Gramsci's theory of hegemony can inform approaches to media literacy. Critical Thinking: Consider the Verdict shows students how to take critical thinking skills from the jury room and apply them in the voting booth and the citizens' forum, and from the shopping mall to the boardroom. This new Third Edition of Critical

**Thinking: Consider the Verdict has been enlivened and updated with a wealth of fascinating new exercises from recent trials and Supreme Court decisions, from political campaigns and social debates. In addition, there is a new section on distinguishing legitimate from fallacious appeals to authority, expanded discussion of the proper role and function of the jury, and extensive new exercises on arguments from analogy. Thinking critically is an essential skill, both for students and for the modern, evidence-based, healthcare practitioner. You need to be able to find, understand and evaluate the evidence that underpins your assignments, clinical decision making and practice. The good news is that you use all of these skills in everyday life. You don't believe every advert you see or respond to every spam email. It's just a question of taking these critical skills and having the confidence to apply them to your academic work. This book will help you do just that. It will enable you to: - recognise your existing ability to be a critical thinker - spot logical flaws and inconsistencies in arguments - consider health issues from multiple perspectives, weighing up the strengths and weaknesses of a case - build a convincing argument in assessments - develop a range of critical skills for successful study and**

healthcare practice. **Critical Thinking Skills for Healthcare** is an essential resource for all health professionals in training. Is it possible to design a forest policy that satisfies ethical and environmental concerns and is acceptable to business, labour and First Nations representatives? What is the best path through the tangle of ethical issues surrounding the collapse of the east coast fishery? What sort of obligations does a rich nation such as Canada have to satisfy the claims of global environmental justice? These are the sorts of issues in applied ethics that are tackled in this collection of essays, the vast majority of which have been written especially for this volume. It is the first Canadian collection of its kind. The book is divided into sections detailing with such topics as the environment and the economy; ethical issues relating to non-human animals; issues of gender; and issues relating to native peoples. Most of the authors are philosophers, though specialists in geography, geology, and the social sciences are also among the contributors. Frequent reference is made to theoretical ethical concerns, but the focus throughout is on applied ethics, and a variety of case studies are included. (Examples include essays on animal rights and the case of native hunters; surface mining in Northern Ontario, the Quebec

arctic; and fishing communities in the Maritimes.) Comparisons are frequently drawn to policies and ethical questions arising in other countries-most prominently the United States. This dissertation compares the learning environment of elite military academies in the U.S. and Malaysia, namely the United States Military Academy, New York (West Point) and the Military Academy of Malaysia, Kuala Lumpur (MAM). The dissertation began as an investigation of the place of e-learning and simulation technologies in educating future military officers. It was assumed that as modern technologies for war and defence have changed, so too must the military academies accommodate to that - especially in producing the right kind of officers who will lead the defence of the nation. Research in West Point and the MAM, however, revealed much more significant and deeper differences between the two learning environments. These are also analysed in this dissertation on the basis of in-depth interviews with staff at both academies and responses to some 241 questionnaires returned by the cadets. One of the most important findings in this study is that the learning environment at West Point is informed by the Thayer System which, in turn, is based on principles strongly reminiscent of the constructivist

**school of pedagogical inquiry. The impact of the Thayer System on the learning environment is analysed, as are the essential features of constructivism. In Malaysia, by contrast, the learning environment in the academy is driven by teacher-oriented practices that are not sensitive to the needs of students. Moreover, the broader authoritarian tendencies in Malaysia have encouraged the entrenchment of didactic modes of teacher-student exchanges in the classroom. These were found not to be conducive to creative, student-centred learning processes capable of producing the kind of officers who can lead the Malaysian military at a time of growing regional insecurity in the Asia Pacific. Approach analogies as puzzles. To solve them, students need to use cognitive processes and critical-thinking skills. These exercises present word and/or picture relationships in several different ways. The goal is to develop skills in visual imagery, reading comprehension, vocabulary development, reasoning and test-taking. Thinking is an innate ability that most people take for granted. But like writing well or speaking effectively before the public, thinking well is a skill that can be learned and improved with practice. In this unique introduction to critical thinking, Robert Bartholomew and Benjamin Radford first lay out the principles of**

critical thinking and then invite readers to put these principles to the test by examining a series of unusual and challenging case studies. Assembling a wide range of bizarre but actual incidents from many cultures and various time periods, they demonstrate how the tools of critical thinking can help to unravel alleged paranormal events and seemingly mysterious behavior. What factors led to the "Martian panic" of 1938? Why did many people conclude that an alien spaceship crashed in Roswell, New Mexico, in 1947? How do we explain the panic expressed by otherwise normal Southeast Asian men who came to believe that a contagious disease was causing their genitals to shrink, or the frenzied dance manias that captivated thousands of Europeans during the Middle Ages? Bartholomew and Radford show that reality is very much a social construction, that cultural assumptions play a large part in our judgments about what is normal and what is deviant, and that the use of critical reasoning is our best means of ensuring an objective perspective. A consistent and compelling narrative is crucial to student engagement with any book. But sadly, so many brief**

editions are mere cut-and-paste versions of their comprehensive selves. Not the case with *Keeping the Republic*'s brief edition. **Professional publication of the RD & A community. "MsoNormal" Anthem Guide to Critical Thinking Skills: Language and Logic' guides readers in the process of critical thinking and persuasive speaking and writing. The text discusses informal thinking, the formal processes of induction, deduction, and syllogistic reasoning, in a clear format that makes it easy for the "beginning logician" to process. Students learn how to form a proposition, identify issues, gather evidence, and process an argument. To get started, logic games, puzzles, and real life examples ask students to consider how we evaluate, analyze, and decide. What happens if Janie says, 'Mom, can I go to the party? All of my friends are going!' And Mom responds, 'What if all of your friends jumped off the empire State building?' Is 'all of my friends are going' a good reason? Does mom have a point? Language and Logic will help students evaluate these everyday decisions. Then a more formal look at induction and deduction challenges students to practice higher-level thinking skills, such as using analogies for evaluation, and working through syllogisms to process ideas. After a review of the Greek Fallacies, readers can have some literary logic fun by analyzing old standards like 'Love is a Fallacy' and the persuasive love poem 'The Passionate Shepherd'"-- Provided by publisher.**

**First Published in 1996. This first of its kind Encyclopaedia charts the influence of philosophic ideas that have had the greatest influence on education from Ancient Greece to the present. Orphans of Islam portrays the abject lives and 'excluded body' of abandoned and bastard children in contemporary Morocco, while critiquing the concept and practice of 'adoption, ' which too often is considered a panacea. Through a close and historically grounded reading of legal, social, and cultural mechanisms of one predominantly Islamic country, Jamila Bargach shows how 'the surplus bastard body' is created by mainstream society. Written in part from the perspectives of the children and single mothers,**
