Explorations in Applied Geography Oct 26 2019 Applied geography, a new frontier in geographic discipline, distinguishes itself from other branches of geography through the application of geographical knowledge and its techniques in solving practical problems of the land and the environment. Explorations in Applied Geography is a felicitation volume in honour of Professor L.R. Singh, Department of Geography, University of Allahabad, who has established his international credentials as a leading exponent of Applied Geography. He considers public policy to be one of the applications of applied geographic principles, since many problems facing society today have a geographical dimension. To Professor L.R. Singh, Applied Geography is the strategy of the trinity of men, space and resources which need to be harmonized in advancing human well-being. This volume, contributed by geographers of eminence within the country and from other parts of the globe, focuses on the following thrust areas: • Natural and environmental hazards • Environmental change and management • Challenges of the human environment • Application of techniques of spatial analysis In a nutshell, the book emphasizes the important proactive role that the Applied Geography must

play in the formulation of public policies and programmes for sustainable human development. This comprehensive and classic compendium will not only be useful to post-graduate students in geography but also provide new vistas in geographic research.

Learning Primary Geography Nov 19 2021 Learning Primary

Geography: Ideas and inspiration from classrooms celebrates children's learning in primary geography. It is a book for all student and practising teachers who would like children to learn about their world in an enjoyable and stimulating way. Every page presents inspiring examples of children's learning, and explains how and why creative approaches such as enquiry learning, learning outside the classroom, and using imaginative resources work so well in primary geography. Using illustrated case studies from a range of schools and classrooms, each chapter showcases the fantastic work all children can do in primary geography. The book explores a wide variety of geographical learning, with chapters focusing on key aspects of the subject, including: primary geography through the school grounds topical geography through issues and events learning about places in primary geography children's agency and action through primary geography Throughout the chapters, the role of primary geography in helping children develop all types of literacies, including spatial, critical and digital literacies, is explored. Written by a highly experienced teacher and lecturer in education, Learning Primary Geography is underpinned and illustrated by examples from a wide range of primary classrooms. It will be a source of support, guidance and

inspiration for all those teaching geography in the primary school.

Geography of the World's Major Regions Mar 24 2022

This volume presents a global view of today's most pressing issues through an analysis of the twelve major regions of the world. Environmental degradation, natural catastrophe, population pressures and human conflict all impact in different ways and to different degrees on the society and environment of these regions. Economic and political restructuring within each region is covered, and topics include: natural resources; agriculture; industry and services; the role of the military; and the impact of global economic change. This work is intended as an introduction for students studying the changing geography of the world, but should also provide a useful overview to students researching specific regions, seeking comparative analysis of regions, or following general courses on the economic and

political geography of both the post-industrial and the developing worlds. Over 250 photographs, maps and figures complement a range of boxed case-studies, key points, questions and guides to further reading.

Mentoring Geography Teachers in the Secondary School

Aug 24 2019 Mentoring Geography Teachers in the Secondary School supports both new and experienced mentors in developing their knowledge and skills in mentoring in geography education. Within the book, chapter authors critically consider how mentoring has been conceptualised and represented in policy and academic debate, as well as examining how mentoring in geography education has been experienced and perceived in practice. Chapters in the book explore a range of perspectives, experiences and aspects of mentoring geography teachers, including:

- Critical engagement with educational policy and practice
- Perspectives from beginning geography teachers
- Mentoring as a professional development opportunity
- The value of engaging with the geography education community in teacher education
- How mentoring meetings and conversations can support beginning geography teachers in their growth and development

This book is a vital source of support and inspiration for all those involved in developing the next generation of geography teachers. The themes of justice, agency and voice - raised and engaged with implicitly and explicitly throughout this edited collection - are of critical importance to mentors, beginning teachers and geography education more

broadly in developing and enacting a progressive vision of mentoring.

Research and Debate in Primary Geography Jul 16 2021 This book brings together recent papers which make important contributions to understanding and developing primary geography. It considers primary teachers’ and trainee teachers’ knowledge of geography; how the primary curriculum uses geography; teachers’ planning of geography teaching; the way in which aspects of geography are taught; what high quality geography might look like; and children’s geographical understanding and voices. Though geography curricula change quite often in countries around the world, the core matters noted above remain of constant and vital importance. The papers in this book either concern research with primary teachers and children, or consider key concerns in primary geography, providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools. This is a stimulating and enticing collection written by leading exponents of, and experts in, primary geography education. This book was originally published as a special issue of *Education* 3-13.

The Revenge of Geography Aug 05 2020 NEW YORK TIMES
BESTSELLER • In this “ambitious and challenging” (The New
York Review of Books) work, the bestselling author of
Monsoon and Balkan Ghosts offers a revelatory prism through
which to view global upheavals and to understand what lies
ahead for continents and countries around the world. In *The
Revenge of Geography*, Robert D. Kaplan builds on the insights,
discoveries, and theories of great geographers and geopolitical
thinkers of the near and distant past to look back at critical
pivots in history and then to look forward at the evolving global
scene. Kaplan traces the history of the world’s hot spots by
examining their climates, topographies, and proximities to other
embattled lands. The Russian steppe’s pitiless climate and
limited vegetation bred hard and cruel men bent on destruction,
for example, while Nazi geopoliticians distorted geopolitics
entirely, calculating that space on the globe used by the British
Empire and the Soviet Union could be swallowed by a greater
German homeland. Kaplan then applies the lessons learned to
the present crises in Europe, Russia, China, the Indian
subcontinent, Turkey, Iran, and the Arab Middle East. The result
is a holistic interpretation of the next cycle of conflict
throughout Eurasia. Remarkably, the future can be understood in
the context of temperature, land allotment, and other physical
certainties: China, able to feed only 23 percent of its people
from land that is only 7 percent arable, has sought energy,
minerals, and metals from such brutal regimes as Burma, Iran,
and Zimbabwe, putting it in moral conflict with the United
States. Afghanistan’s porous borders will keep it the principal
invasion route into India, and a vital rear base for Pakistan,
India’s main enemy. Iran will exploit the advantage of being the

only country that straddles both energy-producing areas of the Persian Gulf and the Caspian Sea. Finally, Kaplan posits that the United States might rue engaging in far-flung conflicts with Iraq and Afghanistan rather than tending to its direct neighbor Mexico, which is on the verge of becoming a semifailed state due to drug cartel carnage. A brilliant rebuttal to thinkers who suggest that globalism will trump geography, this indispensable work shows how timeless truths and natural facts can help prevent this century's looming cataclysms.

American Geography and Geographers May 14 2021 Basing the volume on archival materials, Geoffrey Martin explains not only what American geographers did, but also why they chose the paths they took. The letters upon which the volume relies enable Martin to enter the minds of our predecessors in ways that histories based on secondary sources cannot. By tracing interpersonal connections among domestic geographers, and with overseas colleagues (especially in Germany and France), Martin sheds new light on the intellectual and structural foundations of American geography.

The Changing Nature of Geography (RLE Social & Cultural Geography) Jan 22 2022 This book is an introduction to the nature of geography. There are detailed sections on content, methods and purposes and an attempt is made to distinguish progress from those changes which are merely fashion and those which result in genuine progress. One of these, resulting partly from the adoption of quantitative techniques, is the improvement in the accuracy and the type of explanation which the geographer is now able to give. The new techniques have also helped in the bringing about of profound changes in geographical laws, the use of models and even the relevance of determinism.
