One of America's foremost philosophers challenges the lost generation of the American Left to understand the role it might play in the great tradition of democratic intellectual labor that started with writers such as Walt Whitman and John Dewey. This pioneering and in-depth study into the regulation of shale gas extraction examines how changes in the constitutional set-ups of EU Member States over the last 25 years have substantially altered the legal leverage of environmental protection and energy security as state objectives. As well as offering the first formal assessment of the legality of fracking bans and moratoria, Ruven Fleming further proposes a new methodology for the development of legally sound regulation of new energy technologies in the context of the energy transition. This handbook will help veterinary clinicians and their staff to manage cases of poisoning in dogs and cats. It will also help answer enquiries about potential poisonings received from concerned pet owners. The content has been compiled from over 15 000 past cases referred to the Veterinary Poisons Information Service - a 24-hour information service for veterinary surgeons. The VPIS experience is compared and contrasted with case data and reports from the literature to provide a comprehensive overview of both toxicity and management for the agents included. Each agent, or group of agents, has a separate chapter covering its effects in either the cat or the dog. In some cases the species information is combined where the clinical effects and management are identical. The chapters provide all the information necessary for the immediate management of a

particular poisoning case. This includes doses at which clinical intervention is advisable and dosing regimens and indications for any drug therapy required. Thus the user will be able to access quickly all the information needed for an emergency situation without having to refer to other sources. Professional politicians have increasingly come under public attack in democratic countries, yet they have received little attention in political science. This text shows that there are both similarities between professional politicians in different countries and notable national peculiarities. This practice-oriented guide covers the handling and use of hazardous chemicals at the workplace, including labelling and storage, transportation, occupational safety and proper registration with the European authorities. Current European Union legislation and directives are cited throughout the text, making this a valuable reference for companies and institutions both inside and outside of the EU common market. Lately, there has been a renewed push to minimize the waste of materials and energy that accompany the production and processing of various materials. This third edition of this reference emphasizes the fundamental principles of the conservation of mass and energy, and their consequences as they relate to materials and energy. New to this edition are numerous worked examples, illustrating conventional and novel problem-solving techniques in applications such as semiconductor processing, environmental engineering, the production and processing of advanced and exotic materials for aerospace, electronic, and structural applications. This updated edition provides research scientists, microbiologists, process engineers, and plant managers with an authoritative resource on basic microbiology, manufacturing hygiene, and product preservation. It offers a contemporary global perspective on the dynamics affecting the industry, including concerns about preservatives, natural ingredients, small manufacturing, resistant microbes, and susceptible populations. Professional researchers in the cosmetic as well as the pharmaceutical industry will find this an indispensable textbook for in-house training that improves the delivery of information essential to the development and manufacturing of safe high-quality products. Includes the keynote addresses and papers presented on the conference themes that covered: environment, ecosystem biology, habitat, diversity and oceanography; population biology and resource assessment; harvesting and conservation strategies for resource management; technology requirements; monitoring, compliance and controls; a review of existing policies and instruments; and governance and management. It also provides the perspectives of participating experts and the conference Steering Committee. The general conclusions of the conference contain the elements that must be addressed and undertaken if deep-sea fish resources are to be sustained and their habitat protected to ensure productivity and safeguard deep-sea biodiversity. The second volume of the proceedings includes posters and corresponding papers presented at the conference as well as papers from workshops held prior to the main conference. This book provides crucial reading for students and researchers of world Englishes. It is an insightful and provocative study of the forms and functions of English in Asia, its acculturation and nativization, and the innovative dimensions of Asian creativity. It contextualizes a variety of theoretical, applied and ideological issues with refreshing interpretations and reevaluations and can be used both as a classroom text and a resource volume. Del Sarto argues that internal disputes over national identity limit the ability of states to participate in regional forums. This is a close look at problems faced in negotiating the Euro-Mediterranean Partnership (EMP) as a regional security project, with particular attention to case studies of Israel, Egypt and

Morocco. The eleventh edition of this essential textbook captures the changing landscape of Company Law. The book has been revised to include the notable changes brought about by the Companies (Amendment) Act, 2015. It provides an incisive analysis of the strategic shift brought by the Companies Act, 2013 and the dimensions of the enabling provisions of the new law. Interesting and easy to understand, this book is a concise text on company law. It discusses the core features of company law, the regulations binding the relationships, the legal strategies to address the ascending problems and the legal trade-offs. Besides focus on the core topics, all the judicial and statutory developments, taken place so far, have been taken into account. Case laws are integrated throughout the book to illustrate key topics. Students preparing for Company Law or Corporate Law paper of respective examinations will find this book immensely useful. A practical and well-illustrated guide to microbiological, haematological, and blood transfusion techniques. This book honors Cornelia Bodea, academician, scholar, professor, teacher, and, above all, friend and colleague to three generations of American and British students of the Romanian past and culture. The studies in this volume, apart from two contributions dedicated to the work of Cornelia Bodea, are arranged in chronological order. They range from an effort to elucidate the image of Napoleon, as seen by Polish participants in Napoleon's failed Russia invasion, a study on the development of the Albanian national consciousness, in which Romania also played a role, an illuminating study of the image of Romania found in the classic eleventh edition of the Encyclopaedia Britannica, World War I, British cultural policy in Romania, post-World War II Romanian-American relations, and a study of the Transnistrian dispute. The scope of these studies reflects the range of Cornelia Bodea's own work, which has dealt with grand themes of Romanian national development, cultural history, and Romanian diplomatic history. Academician Cornelia Bodea passed away in 2010. Contributors to this volume include Dennis Deletant, Radu R. Florescu, Richard Frucht, Joseph Harrington, Ernest H. Latham, Jr., Paul E. Michelson, and Kurt W. Treptow. A new edition of this best-selling textbook reintroduces the topic of library cataloging from a fresh, modern perspective.

- Delineates the new cataloging landscape
- Shares a principles-based perspective
- Provides introductory text for beginners and intermediate students
- Emphasizes descriptive and subject cataloging, as well as format-neutral cataloging
- Covers new cataloging rules and RDA

This popular manual covers all facets of basic estate planning. Tax and accounting issues, ethical issues, and problems related to specific forms of ownership and special classes of persons are examined. Homestead considerations and handling of assets acquired in community property jurisdictions are also featured. This popular guide to climbing Mexico's volcanoes continues as the most complete book available in English. Updated for routes altered or closed due to volcanic activity. This second edition provides a comprehensive review of the facts and trends in veterinarian and human parasitology. Several internationally renowned specialists have been added to the authors of the first edition, and the whole is now organised in an encyclopedic arrangement of comprehensive keywords, thus speeding up the search for information. "Campbell sheds light on Tudor political and artistic culture and the court's response to Renaissance aesthetic ideals. He challenges the predominantly text-driven histories of the period and offers a fresh perspective on the life of Henry VIII"--OCLC

Manufacturers know the value of a knowledgeable workforce. The challenge today is finding skilled people to fill these positions. Since publication of the first edition in 1961, instructors, students, and practitioners have relied on *Manufacturing Processes and Materials* for the foundational knowledge needed to perform in manufacturing roles across a myriad of industries. As an on-the-job reference, anyone working in a technical department of a manufacturing company — regardless of education, experience, and skill level — will use this book to gain a basic understanding of manufacturing processes, materials, and equipment. Now in its fifth edition, the book covers the basic processes, materials, and machinery used in the job shop, toolroom, or small manufacturing facility. At the same time, it describes advanced equipment used in larger production environments. The reader is given a thorough review of metals, composites, plastics, and other engineering materials, including their physical properties, testing, treatment, and suitability for use in manufacturing. Quality, measurement and gaging, process planning and cost analysis, and manufacturing systems are all addressed. Questions and problems at the end of each chapter can be used as a self-test or as assignments in the classroom. *Manufacturing Processes and Materials* is also available as an eBook. Additional teaching materials for instructors: Instructor's Guide (eBook only) Instructor's Slides (zip file)

Constituting the first holistic overview including practical remedies, this handbook provides the background needed by anyone grappling with the complex issue of outdoor lighting and its effects. It describes not only the problems that astronomers and other night sky observers face in reducing the problems of information loss due to light pollution, as well as the problems lighting technologists face in optimising outdoor lighting installations that cause little or no light pollution. The first part is directed to decision makers and managers of outdoor space and covers the areas of general interest, culminating in recommendations to reduce the impact of light pollution. The second part is directed primarily to scientists and engineers, as a support to the design and maintenance of outdoor lighting installations, with special reference to astronomical observations. Elaborating issues from the first part, these contributions include examples that refer to specific outdoor lighting projects and to more general policy and educational measures. Written for designers of lighting equipment and managers of astronomical observatories, but also aimed at the authorities and decision makers responsible for the organization and maintenance of the public space, it will serve a good purpose in graduate or postgraduate curricula for scientists, engineers, economists and law students. This handbook fills the gap that exists between astronomical textbooks, engineering texts and popular brochures about light pollution. Administrative litigation systems are a rapidly developing legal field in many countries. This book provides a comparative study of the administrative litigation systems in China, Hong Kong, Taiwan and Macao, as well as a number of selected European countries that covers both states with an advanced rule of law and new democracies. Despite the different historical backgrounds and the broader context which

has cultivated each individual system, this collective work illustrates the common characteristics of the rapid development of administrative litigation systems since the 1990s as a consequence of the advancement of the rule of law at a global level. All of the contributors have addressed a wide array of key issues in their particular jurisdiction, including court jurisdiction, the scope of judicial review, grounds of litigation claims and mediation in judicial process. Whilst pointing out the shortcomings and challenges which are faced by each jurisdiction, the book offers both ideas and inspiration on how the systems can learn from, and influence each other. This book is essential reading for those studying Chinese law, administrative litigation and comparative law, as well as judges and lawyers specialising in administrative litigation, and administrative courts. Describes and lists the values of popular collectible comics and graphic novels issued from the 1950s to today, providing tips on buying, collecting, selling, grading, and caring for comics and including a section on related toys and rings. Mechanics of Offshore Pipelines, Second Edition, Volume One: Buckling and Collapse gives engineers fundamental knowledge on principles surrounding the mechanical behavior of pipelines and long tubular structures in the oil and gas industry. Addressing common challenges pertaining to buckling and collapse under various offshore loads, the authors go through each challenge experimentally, with supporting and analyzing data to present the main limits encountered. Helpful to both the practicing engineer and the graduate level, the combined effort of analysis supplemented with numerical modeling helps engineers design procedures and guidelines to reproduce the best solution or solve problems using a nonlinear finite element code. Custom formulations are also included to help users gain a deeper understanding of each challenge. Rounding out with helpful appendices, including a glossary of terms, this book continues to deliver critical research and data to engineers that need to design, install and maintain efficient and safe offshore pipelines. Updated to include more practical aspects, such as failure of corroded pipes under external pressure and response of bi-material under bending Delves into cost-effective materials and installation techniques Covers guidelines, practicing methods and recommendations on maintenance and design Recommended as the "bible" for offshore pipelines Explains the full spectrum of classical challenges, such as inelastic structural mechanics and the newest technological demands Pairing Fraser Seitel's unique, humorous voice with the most up-to-date case studies, interviews, news photos, and other techniques, the Practice of Public Relations is truly an "in-your-face" Public Relations textbook. The 12th edition continues the theme of giving readers the knowledge and skills they need to know to be successful in today's world of public relations —including heavy emphasis on social media and ethics. The book also provides the topics of the essays asked in each of these XAT exam. The book also contains 5 Mock tests designed exactly as per the latest pattern of XAT. Each Mock Test has 2 parts as per the new format. Part I contains questions on Decision Making, English Language & Logical Reasoning and Quantitative Ability whereas Part 2 contains Essay Writing and questions on General Awareness on Business Environment, Economics and Polity. The detailed solution to each test is provided at the end of the book. The book also contains the list of essays asked in the last 15 years of XAT and a list of essays for practice. Describes the causes, symptoms, and safe medications for a variety of conditions, including arthritis, constipation, coughing, bruises, diarrhea, ear infections, fleas, mange, sprains, ticks, and worms. With scientific progress occurring at a breathtaking pace, science and technology policy has never been more important than it is today. Yet there is a very real lack of public discourse about policy-making, and government involvement in science remains shrouded in both mystery and misunderstanding. Who is making choices about technology policy, and who stands to win or lose from these choices? What criteria are being used to make decisions and why? Does government involvement help or hinder scientific research? Shaping Science and Technology Policy brings together an exciting and diverse group of emerging scholars, both practitioners and academic experts, to investigate current issues in science and technology policy. Essays explore such topics as globalization, the shifting boundary between public and private, informed consent in human participation in scientific research, intellectual property and university science, and the distribution of the costs and benefits of research. Contributors: Charlotte Augst, Grant Black, Mark Brown, Kevin Elliott, Patrick Feng, Pamela M. Franklin, Carolyn Gideon, Tené N. Hamilton, Brian A. Jackson, Shobita Parthasarathy, Jason W. Patton, A. Abigail Payne, Bhaven Sampat, Christian Sandvig, Sheryl Winston Smith, Michael Whong-Barr This bestselling text continues to lead the way with a strong focus on current issues, pedagogically rich framework, wide variety of medical and biological applications, visually dynamic art program, and exceptionally strong and varied end-of-chapter problems. Revised and updated throughout, the eleventh edition now includes new biochemistry content, new Chemical Connections essays, new and revised problems, and more.
