In The Case against Assisted Suicide: For the Right to End-of-Life Care, Dr. Kathleen Foley and Dr. Herbert Hendin uncover why pleas for patient autonomy and compassion, often used in favor of legalizing euthanasia, do not advance or protect the rights of terminally ill patients. Incisive essays by authorities in the fields of medicine, law, and bioethics draw on studies done in the Netherlands, Oregon, and Australia by the editors and contributors that show the dangers that legalization of assisted suicide would pose to the most vulnerable patients. Lewis has given us a spectacular account of two great men who faced up to uncertainty and the limits of human reason.” —William Easterly, Wall Street Journal Forty years ago, Israeli psychologists Daniel Kahneman and Amos Tversky wrote a series of breathtakingly original papers that invented the field of behavioral economics. One of the greatest partnerships in the history of science, Kahneman and Tversky’s extraordinary friendship incited a revolution in Big Data studies, advanced evidence-based medicine, led to a new approach to government regulation, and made much of Michael Lewis’s own work possible. The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

In this meticulously researched and masterfully written book, Pulitzer Prize-winner Deborah Blum examines the history of love through the lens of its strangest unsung hero: a brilliant, fearless, alcoholic psychologist named Harry Frederick Harlow. Pursuing the idea that human affection could be understood, studied, even measured, Harlow (1905-1981) arrived at his conclusions by conducting research-sometimes beautiful, sometimes horrible-on the primates in his University of Wisconsin laboratory. Paradoxically, his darkest experiments may have the brightest legacy, for by studying "neglect" and its life-altering consequences, Harlow confirmed love's central role in shaping not only how we feel but also how we think. His work sparked a psychological revolution. The more children experience affection, he discovered, the more curious they become about the world: Love makes people smarter. The biography of both a man and an idea, The Measure of Love is a powerful and at times disturbing narrative that will forever alter our understanding of human relationships. Psychology has become a global profession. Professionals are now readily able to practice in geographic areas far from where they were trained. In practice, psychology has a social contract with the public to promote human and societal welfare, all the while responsible for the constant upkeep

of systems that promote, maintain, and demand quality from health care professionals. In Global Promise: Quality Assurance and Accountability in Professional Psychology, editors Judy E. Hall and Elizabeth M. Altmaier examine the tools needed for evaluating the crucial components of quality assurance- education, training, accreditation and designation, licensing and credentialing, ethics, mobility, and continuing professional development- from an international perspective, with a specific focus on practices in the United States, Canada, the European Union, Latin America, Australia, and The Netherlands and vignettes on the United Kingdom, China and South Africa. An international team of contributors synthesizes the progress made in implementing quality assurance mechanisms across the globe and offers diverse perspectives as to how the wider international community can promote quality and mobility. With an eye toward the future of psychology as well as on the systems that will support it, Global Promise is required reading for universities, regulatory bodies, professional associations, professionals and students.
