Both beginning/novice amateur astronomers (at the level of Astronomy and Night Sky magazine readers), as well as more advanced amateur astronomers (level of Sky and Telescope) will find this book invaluable and fascinating. It includes detailed up-to-date information on sources, selection and use of virtually every major type, brand and model of such instruments on today ' s market. The book also includes details on the latest released telescope lines, e.g. the 10-, 12-, 14- and 16-inch aperture models of the Meade LX-R series. As a former editor for Sky & Telescope, Astronomy, and Star & Sky magazines, the author is the ideal person to write this book. This book, "Proof from the Light and Darkness" intends to prove many divine truths to many people. Many will

accept it as proof while many will not. The following are seven of such truths this book will prove: 1) God is a living, eternal and a superior being. 2) The soul is a living and unique pattern of energy created by God and should not be confused with the spirit. 3) God is a union of two entities, which were the first souls to exist male and female therefore God can be him or her. 4) God comes to Earth periodically as Christ-incarnate in the body of a man and a woman. 5) Jesus of Nazareth and Mary of Bethany (the Magdalene) were the Christ's two thousand years ago. 6) Spencer John Atkinson and Pamela Theresa Atkinson are the new names and bodies of the same Christ, Jesus and Mary Magdalene. 7) Heaven is a real and eternally joyful place in another dimension of space. These seven topics and more is a result or a chain reaction from the main proof, God has given me; proof that I am the incarnate soul of Jesus of Nazareth and my wife and I are the Christ. Have no fear; this book is not just another book on religion, however, in order to prove Jesus' soul is back incarnate, the King James Bible must be used, not for its Christian theology or religious teachings, instead for its Divine Arrangements (blueprint, map of predictions or prophecies) concerning the return of Jesus Christ. It's time to stop the confusion caused by so many different beliefs by adding common sense, logic, and deductive reasoning, leading to proof that might be realized by all faiths. This treasury of pagan beliefs and herbal lore tells of remedies and charms, weather signs, and the best seasons and times for carrying out projects.

Three coinciding incidents led directly to the publication of Flock of Dogs. I was perusing my first volume of poetry when I realized that not a one of my historical poems had been included. My Aunt Mary in California passed away on the morning after her 95 birthday. I was led on an incredible photographic journey into Mexico. Thus, with an introspective mind, through kaleidoscopic eyes, moving along my Spirit-guided path, and from the mouth of my Granddaughter Gwendolyn, comes this continuance of my life and times. May these poems jar a few memories, elicit chuckles, bring pause, and above all entertain. A concise overview of the fundamental concepts and applications of atomic physics for students including examples, problems, and diagrams of key concepts. First published in 1999, this is an expanded and updated edition of the best-selling, standard handbook on astrophotography for amateurs. It's been thirty-five years since people last trod the dusty plains of the Moon. Over the course of six landings from 1969 to 1972, twelve men explored, four-wheeled, dug and hiked across the lunar surface. Now, NASA has plans for a seventh landing on the Moon. This time, they want to stay. NASA's plans, dubbed the Constellation architecture, involve the largest launch vehicle ever built, new types of propulsion, and a six-person vehicle to ferry crews from Earth to the Moon. But NASA's plans go far beyond Luna. Eventually, the

lessons learned on the Moon's outpost at Shackleton Crater will teach us how to live—permanently—on the most Earthlike world in our solar system, Mars. NASA will have company: plans for future lunar exploration are being drawn by Europe, Japan, China and India. While specific hardware and mission details will be in flux for some time, the overarching goals, strategies and inspiration for the seventh landing will not change. This book will choose a typical scenario for getting to the Moon that embraces the spirit of exploration embodied by NASA's Constellation architecture. Each chapter moves from a general description to the specific nuts-and-bolts of engineering and science. The Seventh Landing reveals the very latest strategies for how we'll get to the Moon, what we know today, what we want to find out, and what life will be like at the first true outposts on the Moon and Mars. These are Java programs that run on a Web server that allow HTML content to be dynamically generated (often by querying a database) and then sent via the web to a "client" machine that made the request in the first place. Jorelid's book concentrates on teaching the program architect and designer how to fit the various pieces together, spending as little time as possible on the mechanics of coding. As the tech reviewer puts it, "Jorelid's perspective is unique and not voiced in any of the popular Servlet books (such as the ones by Jason Hunter, Marty Hall, Calloway, etc). The code examples in the touring the package sections nicely explain how to use the important methods in the Servlet API. I have yet to see any existing books get into these useful details." Soon after its launch, Ant succeeded in taking the Java world by storm, becoming the most widely used tool for building applications in Java environments.

Like most popular technologies, Ant quickly went through a series of early revision cycles. With each new version, more functionality was added, and more complexity was introduced. Ant evolved from a simple-to-learn build tool into a full-fledged testing and deployment environment. Ant: The Definitive Guide has been reworked, revised and expanded upon to reflect this evolution. It documents the new ways that Ant is being applied, as well as the array of optional tasks that Ant supports.
