From the Publisher: The author spent nearly three years researching vaccine studies from around the world and summarizing them in this monumental work. Each chapter in this Vaccine Safety Manual

begins with a definition of the particular disease for which a vaccine has been developed, including data on who is most at risk, disease prevalence and severity. The vaccine for each disease is then analyzed according to its safety and efficacy profile. The safety sections include studies documenting vaccine-associated morbidity and mortality, as well as several personal stories from vaccine victims attesting to the real toll on human lives. Some chapters also include case histories from the U.S. government's own national database of vaccine damage-VAERS. The efficacy sections analyze data from multiple sources to reveal the prophylactic potential of each vaccine: how likely it is to protect against the disease and reduce its incidence throughout society. Excerpts from congressional hearings, and vaccine debacles of historical significance, are included in this book as well. Charts, graphs, tables and other illustrations supplement the text for added comprehension. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience - such as healthcare professionals, aid workers, military personnel, travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike. Since its emergence in early 2020, the COVID-19 crisis has affected every part of the world. Well beyond its health effects, the pandemic has wrought major changes in people's everyday lives as they confront restrictions imposed by physical distancing and consequences such as loss of work, working or learning from home and reduced contact with family and friends. This edited collection covers a diverse range of experiences, practices and representations across international contexts and cultures (UK, Europe, North America, South Africa, Australia and New Zealand). Together, these contributions offer a rich account of COVID society. They provide snapshots of what life was like for people in a variety of situations and locations living through the first months of the novel coronavirus crisis, including discussion not only of health-related experiences but also the impact on family, work, social life and leisure activities. The socio-material dimensions of quotidian practices are highlighted: death rituals, dating apps, online musical performances, fitness and exercise practices, the role of windows, healthcare work, parenting children learning at home, moving in public space as a blind person and many more diverse topics are explored. In doing so, the authors surface the feelings of strangeness and challenges to norms of practice that were part of many people's experiences, highlighting the profound affective responses that accompanied the disruption to usual cultural forms of sociality and ritual in the wake of the COVID outbreak and restrictions on movement. The

authors show how social relationships and social institutions were suspended, re-invented or transformed while social differences were brought to the fore. At the macro level, the book includes localised and comparative analyses of political, health system and policy responses to the pandemic, and highlights the differences in representations and experiences of very different social groups, including people with disabilities, LGBTQI people, Dutch Muslim parents, healthcare workers in France and Australia, young adults living in northern Italy, performing artists and their audiences, exercisers in Australia and New Zealand, the Latin cultures of Spain and Italy, Asian-Americans and older people in Australia. This volume will appeal to undergraduates and postgraduates in sociology, cultural and media studies, medical humanities, anthropology, political science and cultural geography.
